

Deeplands Garden Club – 2024 Trial Garden

“A Butterfly Garden”

The Deeplands Butterfly Garden is a beautiful place to find gardening inspiration and enjoy the beauty of flowers in bloom. It is a quiet place to watch the butterflies as they collect the nourishment that these flowers provide. We hope visitors will find our garden a peaceful place – taking a moment to smell the flowers and experience the joy of watching butterflies, birds, and pollinators in flight.

To attract the butterflies, we selected a variety of flowering plants and flowers that will bloom throughout the Summer. Many of them are colorful, fragrant, and have texture. Mandevilla, Salvia, Alyssum, and Cosmos among all of the other flowers will not only provide beautiful color but will be irresistible to the butterflies!

To add interest in the garden, we added an arbor and stepping stones. The arbor has been painted in key lime green – providing a beautiful pop of color, which highlights the natural colors of the flowers - red, purple, pink, etc. Butterflies require nectar from the flowers to give them energy, but they also require nutrients from soggy areas. Therefore, we added a small pond/stones, that includes a bubbler and floating water hyacinths; as well as a butterfly puddler.

Please stop by and enjoy the beauty of our garden!
